Purpose

Engineers for Community Service (ECOS) is a student organization that promotes life-long professionalism via educational experiences through local and international community service projects. "The mind has exactly the same power as the hands; not merely to grasp the world, but to change it." - Colin Wilson

Impact

We have built 17 wheelchair ramps for residents in the Columbus area.

We have constructed a tilapia pond, restructured a biodigester, improved the infrastructure of the computer lab, and implemented many other engineering projects at Montaña de Luz in Honduras.

Our broad outreach has impacted groups ranging from the youth to the elderly in STEM related fields.
